Automatic cleaving of fibres between 80-250µm cladding sizes

Automatic cleave tension optimisation

Auto blade position adjustment

RFID technology

Overview

Features

The CT110 series of automatic optical cleavers offers superior cleaving performance compared to a conventional cleaver with a circular blade.

The CT-110 series is equipped with a motorised diamond blade, which allows the operator to gradually cleave a fibre with a specific tension applied.

Thanks to the introduction of RFID technology, the CT110 series is able to recognise what fibre holder is being used and then select the appropriate cleaving programme optimised by the user.

Application

Our high-quality optical fibre cleavers are built to achieve low cleave angles with pristine end-faces for a vast array of fibre types and are heavily utilised in a variety of specialty fibre optic industries, such as universities
