Configured to order  
Wide range of electrical management options  
Support passive to active network migration  
Multi-platform options

Overview

Features

The hybrid aggregation node is an evolution of our standard aggregation nodes with the addition of electrical services provisioning to enable the installation of active components and network management platforms.

Hybrid aggregation node cabinets are available with independently lockable power landing and management sections to enable third party access for power provisioning. All aspects can be customer configured including load ratings, access requirements, electrical circuit management & environmental monitoring capabilities.
