Supports stranded loose tube or ribbon fibre cables

Installs with just a common can wrench

Fully sealed

Designed and tested to Telcordia GR-771

Overview

Features

The LightGuard (LG) 350 is a sealed dome closure designed for large count fibre splicing (up to 480 single or 1152 mass) in a butt configuration. For use in aerial or underground environments where a sealed closure is required, the LG350 is ideal for express, ring or long-haul applications and requires only a common can wrench for installation.
