Installation only requires a can wrench
Made from tough, UV resistant thermoplastic
Weathertight
Compact design

Overview

Features

The LightGuard (LG) 500 aerial weathertight fibre optic splice closure is designed for medium count fibre splicing (up to 144 single or 432 mass) in a butt or in-line configuration. Used in aerial applications, the LG500 is ideal for congested aerial construction due to its compact design and requires only a common can wrench for installation.
