Modular pivot panels  
Innovative splitter cable design  
Rapid installation  
Rapid MACs

Overview

Features

This stainless steel streetside cabinet is designed to accept our standard 19" pivot panels to support last mile distribution for FTTx. Utilising our unique splitter cable, this package enables rapid circuit provisioning via a pre-terminated splitter cable, with unused outputs stored safely in a protective magazine, ready for future deployment. Because it's scalable by up to 24 ports at a time, this cabinet offers a very effective and cost-conscious solution for last-mile FTTx distribution.
