Open modular architecture
Portable and rugged
Bluetooth connectivity
Over eight hours battery life

Overview

Features

Specification

ROGUE cB1 Compact Base pairs directly via Bluetooth with most Android phones and tablets, taking advantage of the best user interfaces currently available.

ROGUE cB1 is hand-held and portable, supporting interchangeable and hot-swappable test modules for maximum flexibility. The WiFi and Bluetooth enabled ROGUE cB1 also provides connectivity to FOCIS fibre scopes, and multi-fibre switch via the USB function port.

ROGUE is an open, flexible, ruggedly built modular test platform that enables customers to choose the functionality needed including tier 1 fibre optic certification, optical time domain reflectometry (OTDR), end face inspection and multi-fibre MPO testing. ROGUE integrates seamlessly with aeRos Test Management, a comprehensive workflow and data management solution. With aeRos, users can integrate every aspect of their workflow for even greater OPEX savings including setting up jobs and equipment before trucks ever roll, interacting with technicians in real time, collecting and analysing data in the cloud, issuing reports more efficiently, and getting to revenue faster.

Applications

- Modular base for ROGUE Test Platform
- Optical network testing
