Simple push-pull connection/disconnection
Self-retention feature eliminates unwanted
connection stress on the motherboard
No screws required for attaching to board

Overview

Features

Fujikura MPO backplane connectors have a simple and reliable push-pull connection/disconnection system. The self-retention feature eliminates unwanted connection stress on the motherboard.

Applications

- Telecom and datacom transmission equipment, specially targeted on the usage at the DWDM market, requiring low loss single mode interconnection
- Optical measurement components
