Note

*1 Holder Adapter Plate (AD-CT110-FH70) is necessary to use FH-70 series.

*2 There are some cases that the set tension is different form the actual tension.

*3 Cleave length means distance between end surface of the fiber holder edge and end surface of the cleaved fiber.

*4 Measured with an interferometer at room temperature, not with a splicer. The average cleave angle changes depending on the environmental conditions, blade condition, operating method, and cleanliness.

*5 Maximum cleaved angle changes depending on the fiber type cleaved and clamp position.

*6 Support 10,000 cleaves per position at cladding dia. 250µm. 20pos. X 10,000 cleaves = 200,000 cleaves The blade life changes depending on the environmental conditions, operating method, and the fiber type cleaved.

*7 Unavailable with battery.

*8 Supported Cladding dia.is 81 to 900µm.
